

V Series envelopes incorporate eight gores. Each gore is built-up from a number of nylon panels which are identified by letters. The row of panels around the base of the balloon, immediately above the fire resistant Nomex mouth, are 'A' panels. 'A' is followed by 'B' with the series continuing upwards. The number of panels varies depending on envelope size, and this can affect the appearance of the colour scheme. The location of the equator, together with the highly curved shape of the gores can significantly influence the positioning of any artwork.

A parachute top is standard. This is constructed from 8 panels that radiate from a centre patch.

There is no extra charge for changes of fabric colour at any of the lines shown on the chart if the colours are from the standard Cameron range.
