

Z-Type envelopes are constructed from 24 gores providing a smooth shape with zero horizontal stress. Each gore is built-up from a number of nylon panels which are identified by letters. The row of panels around the base of the balloon, immediately above the fire resistant Nomex mouth panels, are 'A' panels. 'A' is followed by 'B' with the series continuing upward. The number of panels in each gore varies depending on envelope size and this can affect the colour scheme, especially for spiral and block designs.

The location of the equator is also affected by size and can significantly influence the positioning of any artwork.

A parachute top is standard up to Z-145. A Fast deflation system is available on larger sizes. Parachutes are constructed from 24 panels that radiate from a centre patch.

There is no extra charge for changes of fabric colour at any of the lines shown on the chart if the colours are from the standard Cameron range.

Not to scale

Tick one standard load tape colour. White will be used unless indicated otherwise. BLACK WHITE

MODEL	Z-120	Z-133	Z-145
MAX. PANEL WIDTH	2.56	2.65	2.73
PANEL DEPTH	1.43	1.43	1.43
